

# How to Convert SWF to MP4 on Mac to Enjoy Everywhere

## Why We Need to Convert SWF to MP4 Mac?

### About SWF

SWF is an Adobe Flash file format used to run animated vector graphics directly in a Web browser. For a long time and as of the moment, short and funny SWF animated flash files have taken over the internet. However, as the technology never stops developing, the emergence of new media technology and playback platform means that, in spite of its popularity in displaying animations and video clips on the web, this type of format is rarely served up by common video media players, nor can it be played on any portable devices.

### How to Convert SWF to MP4 on Mac?

Given the incompatibility issues the SWF format can bring, users now turn to convert SWF to another file format that can be more accessible by using any media player and new mobile playback platforms available without the need of any added ware or plug-in. Here MP4 is the one that taking over its place.
